

CANTAB Recruit

Online Clinical Trial Recruitment

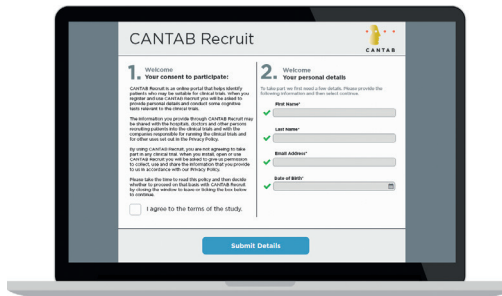

Clinical trials face increasing challenges in identifying eligible subjects, with and without cognitive impairment, resulting in expensive and delayed clinical trial recruitment

CANTAB Recruit uses validated and sensitive online cognitive assessments to screen candidates according to study-specific inclusion/exclusion criteria.

By minimising on-site screen failures and enhancing the validity of clinical research, CANTAB Recruit improves efficiencies and saves clinical resources, time and cost.

Key Features

- Online screening and identification of eligible trial candidates
- Study-specific inclusion criteria and questionnaires
- Automated and consistent test administration
- Performance observation and compliance checks
- Suitable for use in global CNS clinical trials

Reduce Screen Failures

Cognitive Screening Platform

CANTAB Recruit is an online recruitment platform helping to improve the identification of suitable clinical trial participants in high-need CNS indications.

Secure

Patient health information is stored in secure HIPAA and SOC II compliant data centres

Sensitive

Validated measures of cognition assess whether subjects meet the cognitive profile for inclusion or exclusion in a clinical study

Scientific

Expert neuroscience support will advise on the cognitive measures and eligibility criteria to maximise cost savings and sample enrichment

Specific

Cognitive tests and eligibility questionnaires are configured to optimise subject enrichment

User-friendly

An easy-to-use interface and clear on-screen instructions provide users of any age and ability an engaging and simple-to-follow experience
